Series presentation &
product details

“We're inventing swimming without turns!”

Dr. Georg Hof

Founder

Current

Our systems provide the best swimming experience with minimal space requirements, thanks to our patented flow technology

Overview

The LD POOL turbine technology creates a uniform, precisely laminar, and individually controllable flow across the entire width of the pool. This is significantly more efficient than conventional jet systems.

Basic - Components

NANO

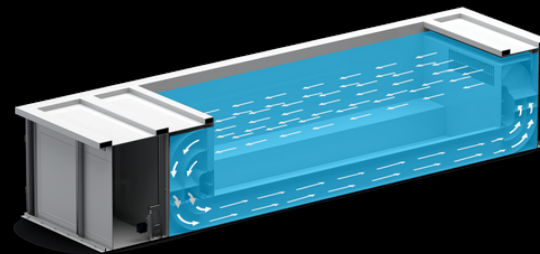

STANDARD

PLUS

PRO

FAMILY

Additions

The water return is achieved through a flow channel spatially separated from the swimming area. 100% of the inflow is suctioned at the end of the pool for a 100% flow across the width of the swimming zone. The ability to adjust performance to the individual needs of each swimmer distinguishes the LD POOL System Series pools.

Current

The LD SPORT Series includes five standard systems that differ in the size of the swimming area and flow speed.

Additions

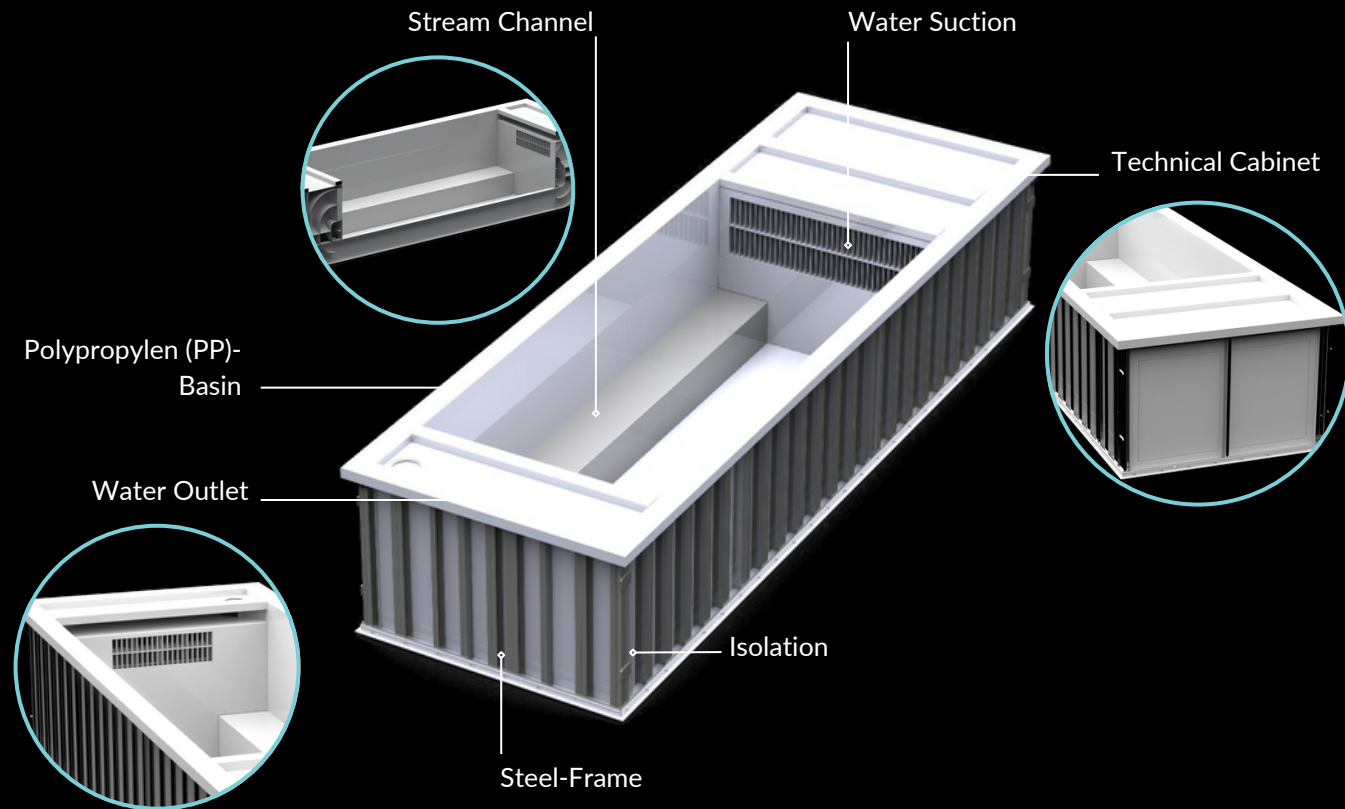

The wellness oasis for sport and fun

Current
Overview

The LD SPORT systems vary in size and flow speed. All systems come with standard components that ensure a smooth swimming experience against the current. Additionally, modular accessory components can be configured for purposes such as water treatment or insulation.

Basic - Components

NANO
STANDARD
PLUS
PRO
FAMILY
Additions

Current

Depending on the combination of modules and the installation method of the pool, an expansion of the technical cabinet may be necessary
